

// Esplanade® 200 SC // Method® 240SL // Derigo®

Roadside Herbicide Management Program

*delivers savings*

Reduce the need for mechanical mowing in your roadside management program by incorporating Esplanade® 200 SC, Method® 240SL and Derigo®. Brought to you by Bayer, these herbicides can reduce annual costs and help mitigate safety risks for vegetation management workers and motorists.

## Product overviews

### /// Esplanade 200 SC

A pre-emergent herbicide that features a unique mode of action providing effective, long-lasting control.

### /// Method 240SL

A flexible and foundational herbicide for difficult to control broadleaf weed and brush species.

### /// Derigo

A broad-spectrum, post-emergent herbicide that provides an ideal solution for post-emergent weed control and plant growth regulation.

/// Esplanade + Method + Glyphosate  
(late winter application)

/// Esplanade + Method (fall) and Method + Derigo  
(summer application)

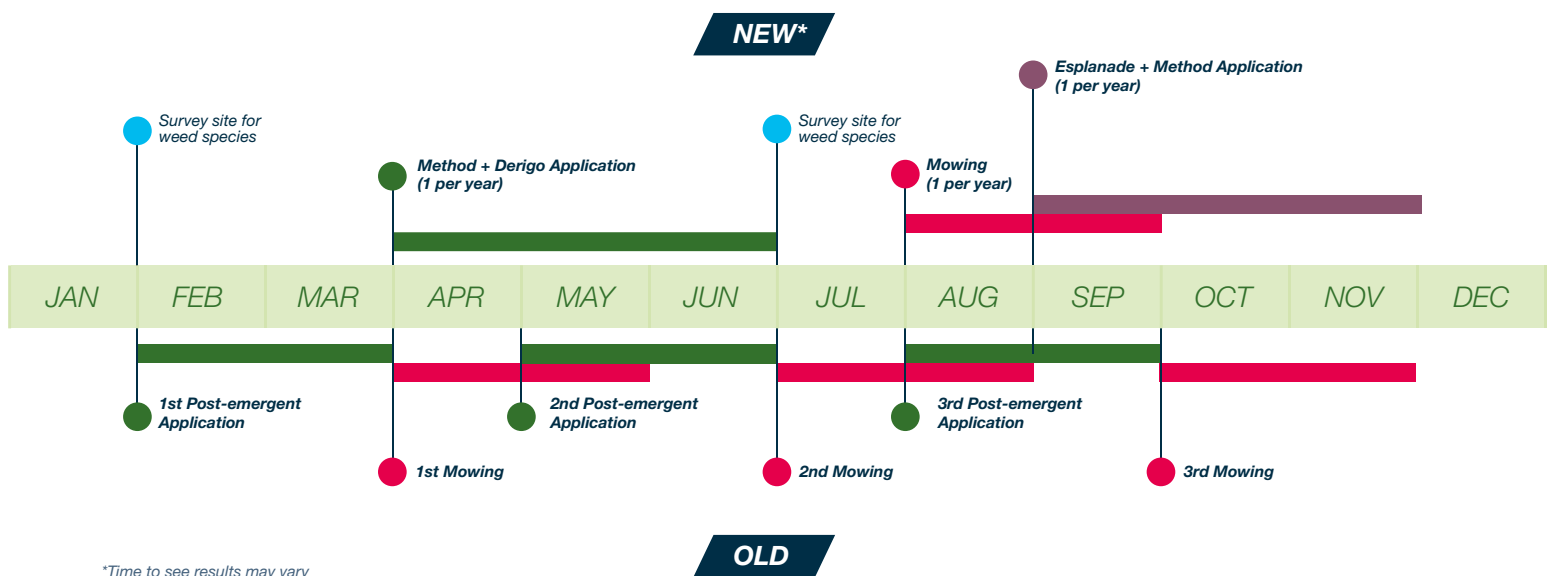

## Reduce costs, risks and the need to mow

Traditional practices of mowing and trimming to manage roadside vegetation are effective, but these practices are only temporary. In addition, mowing requires costly and dangerous repeat cycles throughout the year. This results in increased labor and equipment costs, as well as greater exposure to accidents for both crew members and motorists.

## Applications and timing

- // Apply Esplanade and Method together in the fall prior to ryegrass emergence to control both ryegrass and broadleaf weeds and reduce mowing requirements the following spring
- // Spring or summer application of Derigo and Method 240SL for weed control, plant growth regulation, and to minimize seed heads
- // Monitor late-summer growth to determine if mowing is needed

## Application calendar comparison
